INTISARI

Angka Kematian Ibu (AKI), Angka Kematian Neonatus (AKN), Angka Kematian Bayi (AKB), dan Angka Kematian Balita (AKABA) merupakan beberapa indikator status kesehatan masyarakat. Dewasa ini AKI dan AKB di Indonesia masih tinggi dibandingkan dengan negara ASEAN lainnya. Menurut data SDKI 2007, AKI 228 per 100.000 kelahiran hidup, AKB 34 per 1.000 kelahiran hidup, AKN 19 per 1.000. kelahiran hidup, AKABA 44 per 1.000 kelahiran hidup. Salah satu penyebab Angka Kematian Ibu diantaranya yaitu kematian ibu karena komplikasi kehamilan maupun persalinan sebesar kurang lebih 830 wanita di seluruh dunia setiap harinya. Tujuan penyusunan Laporan Tugas Akhir ini untuk melaksanakan asuhan kebidanan komprehensif pada ibu hamil melalui pendekatan manajemen kebidanan dengan 7 langkah varney dan didokumentasikan dalam bentuk SOAP. Asuhan kebidanan pada ibu hamil ini dimulai pada 30 Desember-19 Maret 2021. Dari hasil penyusunan laporan tugas akhir ini mendapatkan gambaran dan pengalaman nyata dalam pembuatan asuhan kebidanan pada ibu hamil. Kesimpulan dari hasil pelaksanaan asuhan kebidanan pada ibu hamil di PMB Elin Marlina dilaksanakan sesuai dengan prosedur manajemen kebidanan.

Abstract

Maternal Mortality Rate (MMR), Neonate Mortality Rate (AKN), Infant Mortality Rate (IMR), and Toddler Mortality Rate (AKABA) are some indicators of public health status. Currently, the MMR and IMR in Indonesia are still high compared to other ASEAN countries. According to the 2007 IDHS data, the MMR is 228 per 100,000 live births, the IMR is 34 per 1.00 live births, and the AKN is 19 per 1,000. live births, AKABA 44 per 1000 live births. One of the causes of maternal mortality is maternal mortality due to complications of pregnancy and childbirth by approximately 830 women worldwide every day. Women died from complications during and after pregnancy and childbirth. Most of these complications develop during pregnancy and most are preventable and treatable. The purpose of the preparation of this final report is to carry out comprehensive midwifery care for pregnant women through a midwifery management approach with 7 Varney steps and documented in the form of SOAP. Midwifery care for pregnant women begins on December 30th - March 19th 2021. From the results of the preparation of this final project report, we get an overview and real experience in making midwifery care for pregnant women. The conclusion from the results of the implementation of midwifery care for pregnant women at PMB Elin Marlina was carried out in accordance with midwifery management procedures.
