Intisari

Infeksi nosokomial merupakan suatu masalah yang nyata di seluruh dunia dan terus meningkat. Akibat yang ditimbulkan sangat merugikan pasien, selain hari rawat dan biaya perawatan menjadi bertambah sampai menyebabkan kematian. Perawat sangat berperan penting terhadap pencegahan HAIs karena perawat merupakan anggota tim kesehatan yang berhubungan langsung dengan pasien dan bahan infeksius di ruang rawat dalam menilai kinerja perawat salah satunya adalah dengan melakukan penilaian terhadap kegiatan perawat dalam memberikan asuhan keperawatan sesuai dengan standar operasional prosedur dan standar asuhan keperawatan. Pengetahuan seorang perawat akan mempengaruhi tindakan pencegahan *healthcare associated infections* (HAIs). Tujuan dari penelitian ini yaitu untuk diketahuinya hubungan pengetahuan perawat dengan tindakan pencegahan *healthcare associated infections* (HAIs) di RSUD Ciamis. Metode penelitian yang digunakan yaitu analitik kuantitatif dengan pendekatan *cross sectional*. Sampel sebanyak 66 dengan teknik sampel *proporsional random sampling*. Hasil penelitian menunjukkan pengetahuan perawat tentang pencegahan *healthcare associated infections* (HAIs) sebagian besar perawat berpengetahuan baik sebanyak 42 orang (63,6%), tindakan pencegahan *healthcare associated infections* (HAIs) sebagian besar berkategori baik sebanyak 51 orang (77,3%), dan terdapat hubungan yang signifikan antara pengetahuan perawat dengan tindakan pencegahan *healthcare associated infections* (HAIs) di RSUD Ciamis karena nilai $\alpha > p$ value ($0,05 > 0,000$). Hubungan ini ditunjukkan dengan nilai korelasi sebesar 0.658 yang termasuk kedalam kategori kuat (0,60-0,80).. Kesimpulan penelitian ini adalah ada hubungan antara pengetahuan perawat dengan tindakan pencegahan *healthcare associated infections* (HAIs). Saran diharapkan semua perawat dapat melakukan *self evaluation* dalam setiap tindakan keperawatan yang dilakukan sehingga angka kejadian infeksi nosokomial tidak terjadi.

Kata Kunci : pengetahuan, tindakan pencegahan *healthcare associated infections* (HAIs), perawat

Abstract

Nosocomial infection is a real problem worldwide and continues to increase. The consequences are very detrimental to the patient, in addition to the number of days spent in hospital and the cost of treatment increases to the point of causing death. Nurses play an important role in the prevention of HAIs because nurses are members of the health team who deal directly with patients and infectious materials in the wards. In assessing the performance of nurses, one way is to evaluate the activities of nurses in providing nursing care in accordance with standard operating procedures and standards of nursing care. A nurse's knowledge will influence the prevention of healthcare associated infections (HAIs). The purpose of this study is to find out the relationship between nurse knowledge and prevention of healthcare associated infections (HAIs) at Ciamis Hospital. The research method used is quantitative analytic with a cross sectional approach. A sample of 66 with a proportional random sampling technique. The results of the study showed that most of the nurses' knowledge about preventing healthcare associated infections (HAIs) had good knowledge of 42 people (63.6%), the prevention of healthcare associated infections (HAIs) was mostly in the good category of 51 people (77.3%), and there was a significant relationship between the knowledge of nurses and the prevention of healthcare associated infections (HAIs) at Ciamis Hospital because the value $\alpha > p$ value ($0.05 > 0.000$). This relationship is indicated by a correlation value of 0.658 which is included in the strong category (0.60-0.80). The conclusion of this study is that there is a relationship between nurse knowledge and prevention of healthcare associated infections (HAIs). Suggestions are that all nurses can carry out self-evaluations in every nursing action taken so that the incidence of nosocomial infections does not occur.

Keywords : knowledge, prevention of healthcare associated infections (HAIs), nurse
