ABSTRACT

Student problems, especially those related to personal and environmental hygiene, such as the habit of washing hands with soap, wearing masks and others. The purpose of this study was to describe the knowledge of elementary school students about COVID-19 prevention at SDN Sirnabaya 2 Karawang. The method used is descriptive method that uses observation, interviews or questionnaires about the current state of affairs, regarding the subject we are researching. The number of samples in this study were 67 respondents with a simple random sampling technique (drawn). The results of this study indicate that the knowledge of elementary school (SD) students about the prevention of COVID 19 at SDN Sirnabaya 2 Karawang, the highest frequency is in the less category as many as 38 people (56.7%), and the lowest frequency is in the good category as many as 12 people (17.9%). Students and students of SDN Sirnabaya 2 Karawang do not yet have sufficient knowledge about COVID-19 prevention, this is due to a lack of information, either health education or health education about COVID-19 prevention to school-age children in Sirnabaya Village. Therefore, health education should be carried out targeting elementary school students and students because they are a vulnerable group exposed to COVID-19 and it is hoped that the Government in Sirnabaya Village will pay attention to how to prevent COVID-19. Sirnabaya 2 Karawang has a poor knowledge of 38 people (56.7%).

Keywords: *Knowledge, Elementary school students, Prevention, COVID-19.*

GAMBARAN PENGETAHUAN SISWA SEKOLAH DASAR (SD) TENTANG PENCEGAHAN COVID 19 DI SDN SIRNABAYA 2 KARAWANG

INTISARI

Masalah siswa terutama yang berhubungan dengan kebersihan pribadi dan lingkungan, seperti, kebiasaan cuci tangan pakai sabun, memakai masker dan lain-lain. Tujuan penelitian ini adalah untuk mengetahui gambaran pengetahuan siswa sekolah dasar tentang pencegahan COVID-19 di SDN Sirnabaya 2 Karawang. Metode pada penelitian ini menggunakan metode deskriptif yang menggunakan observasi, wawancara atau angket yang berkaitan mengenai subjek yang sedang kita teliti. Jumlah sampel pada penelitian ini sebanyak 67 responden dengan teknik pengambilan sampel *simple random sampling*. Hasil penelitian ini menunjukkan bahwa pengetahuan siswa sekolah dasar (SD) tentang pencegahan COVID 19 di SDN Sirnabaya 2 Karawang, frekuensi tertinggi yaitu berkategori kurang sebanyak 38 orang (56,7%), dan frekuensi terendah berkategori baik sebanyak 12 orang (17,9%). Siswa dan siswi SDN Sirnabaya 2 Karawang belum memiliki pengetahuan yang cukup tentang pencegahan COVID-19, hal ini di sebabkan adanya faktor kurangnya informasi baik itu penyuluhan kesehatan atau pendidikan kesehatan tentang pencegahan COVID-19 kepada anak usia sekolah di Desa Sirnabaya. Penyuluhan kesehatan sebaiknya dilakukan dengan sasaran siswa dan siswi SD karena termasuk kelompok rentan terpapar COVID-19 dan diharapkan kepada Pemerintah di Desa Sirnabaya untuk ikut memperhatikan cara pencegahan COVID-19. Kesimpulan dari penelitian ini menunjukkan bahwa sebagian besar siswa dan siswi SDN Sirnabaya 2 Karawang memiliki pengetahuan yang kurang sebanyak 38 orang (56,7%).
